### Open Dutch Student Championship Computer-Roshambo

Roshambo (Paper-scissors-rock) is a well-known game played all over the world. Two players sit face-to-face. They count to three and then simultaneously make a symbol with their right hand: a fist (rock), flat hand (paper) or two fingers spread out (scissors). Now rock wins from scissors, scissors win from paper and paper wins from rock. Equal symbols is a draw. The optimal strategy in this game on the long term is to play randomly. In a tournament, however, time is limited and non-optimal opponents are present. To win the tournament, a player should predict the opponents and be unpredictable itself.

9 teams participated from universities of Groningen, Delft, Amsterdam and Maastricht. The competition started in februari 2002 and closed on July 1<sup>st</sup>. The programming language was Java.

#### Tournament setup

Next to the 9 competitors, 13 standard bots joined the competition: Copy, Just Rock, Rotating, Random, 226, Switching, Freq, Pi, Switch a Lot, Flat, Anti Flat, Foxtrot, and Bruijn 81. Also the world champion from 1999, Iocaine Powder by Dan Egnor was playing in a Java version. This was announced in advance to the competitors.

Each match lasted 1000 moves and 500 complete rounds were held. This means that every program made  $22 \times 500 \times 1000$  moves. The total tournament took 9 hours of computation on an AMD Athlon 1.333 Ghz PC. The outcome of the tournament is the average score over all rounds.
